

NEX GENN Tool Management

User Guide

Everything the app can do — from setting up the device to the very last button.

App version 1.3.0

Powered by 369ai

How to read this guide

You don't have to read this front to back. If you're new, start at the beginning and work through “Getting started” — that covers connecting the device, logging in and finding your way around. After that, jump to whatever you actually need using the contents list below.

Every screen in the app has its own short section here. Each one tells you what the screen is for, how to open it from the Home screen, and the exact taps to get the job done. Where it helps, there's a real screenshot so you know you're in the right place.

A couple of things before you start

- Names, prices and amounts in the screenshots are sample data. Yours will show your own tools, customers and figures.
- Anything marked “for administrators only” needs the admin login. If that's not you, you can skip those parts.

PART 1 · GETTING STARTED

Welcome

NEX GENN Tool Management is the app you use to run your tool-rental business day to day. It's a rental desk, a tool catalogue, a price list, a customer book and a set of reports rolled into one — all on a single tablet or phone.

On a normal day you'll mostly live in two screens: New Rental for booking tools out to a customer, and Rental Orders for seeing what's out and bringing it back in. But there's a lot more under the surface — keeping your tools and prices up to date, watching availability, looking after customers, logging expenses and checking how the business is doing. This guide walks through all of it.

Who this is for

- Counter staff — book tools out, check them back in, take payment.
- Managers — keep tools and prices current, watch availability, look after customers, read the reports.
- Administrators — set up the device, manage branches and the home-screen banners.

The app runs on top of an Odoo back office, so anything you do here shows up there too, and the other way around. You don't need to know any of that to use it — it just means the numbers always line up.

Connecting the device the first time

What it's for

Before anyone can log in, the tablet or mobile has to be pointed at your business's system. The Device Setup screen walks you through it from top to bottom: the Server URL (the address of your server, starting `http://` or `https://`), the Database (once the URL is in, the list of databases loads and you pick yours), and the Admin Credentials (an admin username and password). Tap Configure Device and the tablet is linked.

How to get there

This is the very first screen on a brand-new device. You only ever do it once per device.

Step by step

- Type your Server URL into box 1.
- Wait a moment, then pick your Database from box 2 (it fills in once the URL is recognised).
- Enter an admin Username and Password in box 3. Tap the eye to check the password.
- Tap Configure Device. When it links, the app moves on to the login screen.

Good to know

- Your device has to be registered by your admin beforehand — the screen reminds you that the Device ID must be pre-registered.
- You only do this once. After that the app remembers the connection and goes straight to login.
- The first time round, your tablet or mobile may ask to use the camera — tap Allow. It's used for scanning device-registration QR codes.

Configure Device

Your Device ID must be pre-registered by your admin.
You only need to do this once per device.

Powered by 369ai

Device Setup — fill in the server, database and admin login, then tap Configure Device.

Logging in

What it's for

This is the front door. Under the “Welcome back” heading there's an account card with two boxes — Username or Email and Password. Type the details your admin set up for you and the rest of the app unlocks. The app remembers you afterwards, so you won't have to do this every time — only after you log out.

How to get there

Open the app. If you're not already signed in, the “Welcome back” login screen is waiting for you.

Step by step

- Tap the Username or Email box and type your username — for most people that's their email address.
- Tap the Password box and type your password; the letters stay hidden. Tap the eye icon on the right to check what you've typed.
- If you want the app to remember your login on this device, turn on Auto Fill Credentials.
- Tap the orange Login button. If it's right, the app continues; if not, a small message pops up — check for typos and try again.

Good to know

- Forgot your username or password? Your admin can look it up or reset it; there's no self-service reset.
- Both boxes have to be filled in or the app won't let you continue.

The login screen — your username is usually your email; tap the eye to check your password.

Picking your branch

What it's for

If your business runs more than one branch, the app asks which one you're working from before it lets you in. Everything you then see — tools, orders, reports — belongs to that branch. The tick shows which one is currently selected.

How to get there

It appears straight after login (and only when you have more than one branch to choose from).

Step by step

- Read the list under “Pick a branch to continue”.
- Tap the branch you're working from today — it highlights and shows a tick.
- Tap Continue. The Home screen opens for that branch.

Good to know

- Working somewhere else tomorrow? You can switch branch again from your Profile screen.
- Only one branch on your account? You'll skip this screen entirely and go straight to Home.

Pick a branch to continue — choose where you're working from, then tap Continue.

The Home screen

What it's for

Home is your launch pad. Everything in the app is one tap away from here. The tiles are sorted into sections — Operations, Tools Details & Pricing, Customers and Reporting — so you're not hunting through a long list.

How to get there

It's the screen you land on after logging in. The Home button at the bottom brings you back here from anywhere.

Step by step

- Across the top there's a banner that slides between any promotions your admin has set up, with today's date and the time just below it.
- The purple “Quick Access” strip shows which company or branch you're working in.
- Below that come the tiles, grouped by section. The little number next to each section heading tells you how many tiles are in it.
- Tap any tile to open that feature; tap the arrow at the top-left or the Home button to come back.

Good to know

- Three buttons sit at the bottom wherever you are: Home, Profile and Logout (Logout asks first, so a stray tap won't catch you out).

PART 2 · OPERATIONS (RENTALS)

New Rental

What it's for

New Rental is where a rental begins. You pick the customer, add the tools they're taking and confirm — and the order then moves along a clear track at the top: Draft → Confirmed → Checked Out → Checked In → Invoiced. The stage tells everyone exactly where the rental has got to.

How to get there

From the Home screen: Home → New Rental.

Step by step

- Tap New Rental on the Home screen.
- In the Customer box, search for the customer — or add their phone and email to create a new one on the spot. (You have to choose a customer before you can add tools.)
- On the Rental Lines tab, add each tool and set how many and for how long.
- Tap Save Draft to keep it for later, or Confirm to lock the booking in and move it to the Confirmed stage.
- When the customer collects, the order is Checked Out; when they bring the tools back, it's Checked In; raising the bill makes it Invoiced.

Good to know

- The Responsible name shows who's handling the order — useful when more than one person works the counter.
- Cancel backs the whole order out if it was started by mistake.
- A half-finished booking saved as a Draft is waiting for you in Rental Orders, ready to pick up again.

< New Rental Order

Rental Lines Timesheet Notes

Please enter a customer name to add tools

Save Draft **Confirm**

New Rental Order — choose the customer, add tools on Rental Lines, then Save Draft or Confirm.

After you confirm: the rental workflow

Confirming a rental isn't the end — it's the start of a short journey. Along the top of every order is a track that shows where it has got to: Draft → Confirmed → Checked Out → Checked In → Invoiced. As the order moves along that track, the buttons at the bottom change to offer only the next sensible step. This section walks through each one in order.

Checking tools out

Once an order is Confirmed, the Check-Out Tools button hands the tools over to the customer and moves the order to Checked Out. It opens a short wizard so nothing is missed at the counter.

- Tap Check-Out Tools.

- For each tool, choose its Condition, and snap an optional photo of the tool as it goes out.
- If you're taking money up front, type the Advance amount and pick how it was paid — Cash, Card, Bank or Credit (for Cash you can enter what was handed over to work out the change).
- Capture the customer's ID Proof — the front is required, the back is optional — using Camera or Attach.
- Tick to accept the Terms & Conditions, then have the customer sign in the signature box.
- Tap Confirm Check-Out. The order moves to Checked Out.

Good to know: the condition you record now is what you'll compare against when the tools come back, so be honest about any marks or wear.

Applying a discount

While an order is Checked Out, the Discount button lets you take money off — but only with sign-off, so giveaways stay accountable.

- Tap Discount, then fill in the authorisation: the authoriser's name, their signature, and a photo of them. Tap Next.
- If the order has more than one tool, choose Total Discount (spread across the whole bill) or Per Product (a separate discount on each line).
- Set the discount as a Percentage or a Fixed amount and type the value.
- Tap Apply Discount. The discount shows in the totals.

Good to know: you can reopen the Discount button later to change it, or use Remove Existing Discount to clear it.

Applying tax

The Tax button (also on a Checked Out order) adds tax to the bill.

- Tap Tax.
- If there's more than one tool, pick Total Tax (one rate for everything) or Per Product (a rate on each line).
- Type the tax percentage — the tax amount works itself out as you type.
- Tap Apply Tax.

Good to know: tax here is always a percentage, never a fixed amount.

Checking tools in

When the customer brings the tools back, the Check-In Tools button closes the rental and settles the bill. It opens a return wizard.

- Tap Check-In Tools. The check-in date is set to today.
- For each tool, record its return Condition and snap an optional check-in photo.
- Late fees fill in by themselves — the app works out the extra days beyond the planned return and multiplies by the fee per day.
- If a tool came back damaged, add a Damage Note and a Damage Charge.
- Check the payment summary — rental, tax, late fees, damage, discount and any advance — down to the AMOUNT DUE.

- Pick the payment method, then take the customer's signature and the staff (authority) signature with the signer's name.
- Tap Confirm Check-In. The order moves to Checked In.

Good to know: if the customer paid an advance at checkout, you can tick Return Advance to hand it back as part of the settlement.

Late returns and late fees

If a customer brings the tools back after the planned return date, the app charges a late fee for every extra day — so there's no need to work it out by hand.

- The daily rate comes from the Late Fee set against each tool in Pricing Rules (the Late Fee column).
- The app counts the extra days — the difference between the actual return date and the planned return date — and multiplies them by that daily rate.
- At check-in, an overdue order shows a late warning and the number of extra days, and the late fee is added to the Amount Due automatically.

Good to know: late fees are worked out for you and can't be typed over. A tool with no Late Fee set in Pricing Rules is never charged extra, however late it comes back. Late-fee totals show up later as Late Fees in the Sales Report and Rental Dashboard, and overdue orders are counted as Late Returns in Order Reports.

Partial check-in (returning some tools)

Sometimes a customer brings back only part of the order and keeps the rest a little longer. The check-in wizard handles that too.

- Start a check-in as usual, but tap Remove on the tools that are NOT coming back yet.
- The button changes to Save Partial Return — tap it.
- The returned tools are recorded; the rest stay pending and the order stays in Checked Out.
- When the remaining tools come back, check in again — the ones already returned are left out automatically.

Good to know: a partially returned order shows a Partial Return Invoice button so you can bill for what's already come back.

Marking the rental done and taking payment

After a full check-in the order is ready to be wrapped up.

- Give the customer a quick Customer Rating if you like (you can update it later).
- Tap Mark Done to finish the order — it moves to Invoiced.
- If anything is still owed, the order shows an Unpaid badge with a Mark Paid button; tap it once the money is in.

Good to know: the status colours match the rest of the app — green for paid, blue for invoiced, red for cancelled.

Rental invoices

An order can produce up to three invoices, and the right buttons appear as the order moves along:

- Checkout Invoice — the bill for what went out at pickup.
- Partial Return Invoice — appears when some tools have been returned early, covering just those.
- Check-In Invoice — the final bill once the order is invoiced, including late fees, damage, discount and tax.
- Each one opens a preview where you choose paper size (A4 or A5) and then Download PDF, Print, or Send WhatsApp to the customer.

Good to know: the invoices are produced from the same figures you see on the order, so they always match what the customer was charged.

Rental Orders

What it's for

Rental Orders is the history of every rental. Search by order number, customer or phone, and filter by stage. Each row shows the reference (RNT/...), the customer, the dates, how many tools, the amount and a coloured status so you can see at a glance what's out, what's back and what's been paid.

How to get there

From the Home screen: Home → Rental Orders.

Step by step

- Tap Rental Orders on the Home screen — the newest sit at the top.
- Use the chips along the top — All, Draft, Confirmed, Checked Out, Checked In, Done, Invoiced, Paid, Unpaid — to show just one kind.
- Search by order number, customer name or phone in the box.
- Tap any row to open the full order, move it to the next stage, or take payment.
- Tap the round + at the top-right to start a new rental without going back to Home.

Good to know

- The coloured status tells you at a glance where each rental is — the same colours are used right across the app.
- An “Advance” line on a row means the customer has already paid part of the bill up front.
- Drag the list down to pull in the latest orders.

Rental Orders — every rental, filterable by stage, searchable, tap any one to open it.

PART 3 · TOOLS, PRICING & AVAILABILITY

Tools & Equipment

What it's for

Tools & Equipment is the full list of everything you rent out. Browse it, search it, filter by status, open any item to see its details and photo, and add new tools. Each tile shows the tool's name, its code, its rate per day and a coloured status badge.

How to get there

From the Home screen: Home → Tools & Equipment.

Step by step

- Tap Tools & Equipment on the Home screen.
- Scroll the tiles, or search by name, code, serial or barcode in the box.
- Tap a status chip — All, Available, Rented, Maintenance or Retired — to narrow the list.
- Tap any tool to see its details — photo, rate, status and description.
- To add a new tool, tap the round + button at the top-right and fill in its name, code, category and rate.

Good to know

- The status badge on each tile tells you instantly whether a tool is free (green Available) or out (orange Checked Out / Rented).
- A tool showing “No pricing” hasn't had a rate set yet — add one under Pricing Rules before you try to rent it.
- A clear photo makes a real difference when the counter is busy and you're picking tools by sight.

Tools & Equipment — your whole catalogue, searchable and filterable by status.

Pricing Rules

What it's for

Pricing Rules is the price list for everything you rent. For each product it shows the category, the number of units, the rental period (e.g. Per Day), the price and any late fee. This is where the rates on the tool tiles and on every rental come from.

How to get there

From the Home screen: Home → Pricing Rules.

Step by step

- Tap Pricing Rules on the Home screen.
- Search for a product by name, or use the Category and Period dropdowns to narrow the list.
- Read each row across: product, category, units, period, price and late fee.
- Tap a row to open it and change the rate or the late fee.

Good to know

- The Late Fee column (shown in red) is what's charged when a tool comes back later than agreed — a dash means no late fee is set.
- The count at the top-right (“22 of 22”) tells you how many products match your current search and filters.
- Change a price and it only affects rentals from then on — past orders keep the rate they were booked at.

< Pricing Rules

Pricing Rules — the rate and late fee for every product, searchable by name, category and period.

Tool Categories

What it's for

Tool Categories is the list of groups your tools are sorted into — Hand Tools, Cleaning Equipment, Safety Equipment, Services and the like. Each row shows the category's short code and how many tools sit inside it. Those same groups become the filters you see elsewhere in the app.

How to get there

From the Home screen: Home → Tool Categories.

Step by step

- Tap Tool Categories on the Home screen.
- Read down the list — each row is a category with its code on the left and its tool count on the right.
- Use it to check a group exists, or to see at a glance where your tools are concentrated.

Good to know

- A category showing 0 Tools is empty — nothing has been filed under it yet.
- Keeping categories tidy keeps the rest of the app easy to search and filter.

Tool Categories — the groups your tools are sorted into, with a tool count for each.

Tool Availability

What it's for

Tool Availability is the at-a-glance picture of your stock. The cards across the top total it up — total tools, how many are available, how many are checked out, total rentals and total revenue. Below, every tool is listed with its status, quantity, how many are available or out, its rentals, price, late fee and revenue.

How to get there

From the Home screen: Home → Tool Availability.

Step by step

- Tap Tool Availability on the Home screen.
- Read the summary cards for the headline numbers.
- Search for a tool, or use the status and category dropdowns to narrow the list.
- Read each row to see exactly how many of that tool are free versus out.
- Tap Download Excel or Download PDF to export the whole list.

Good to know

- Run this first thing to see what's free before you promise a tool to a customer.
- The green Avail and orange Rented badges make problem tools jump out.
- Availability looks after itself — it moves as tools are checked out and back in.

Tool Availability — totals up top, a per-tool breakdown below, exportable to Excel or PDF.

PART 4 · CUSTOMERS

Customers

What it's for

Customers is your address book. Every person or company you rent to lives here, with their phone, email and how many rentals they've had. Search it to find someone fast, or open a record to check or update their details.

How to get there

From the Home screen: Home → Customers.

Step by step

- Tap Customers on the Home screen.
- Search by name, code, phone or email in the box at the top.
- Read each row — the name, contact details and the rental count on the right.
- Tap a customer to open their details.

Good to know

- New customers can also be added on the spot while you're starting a New Rental — they then appear here too.
- A customer's first initial fills the round avatar, which makes the list quick to scan.

< Customers		
Search by name, code, phone, or email...

Customers — search by name, phone or email; each row shows how many rentals they've had.

Customer ID Proofs

What it's for

Customer ID Proofs is where you keep a photo of each customer's ID document, front and back. It's the same customer list, opened straight onto the ID section — handy when you rent valuable tools and want proof of who took them. From the Edit Customer card you can capture or upload the ID, change it, remove it, or update the customer's other details.

How to get there

From the Home screen: Home → Customer ID Proofs.

Step by step

- Tap Customer ID Proofs on the Home screen.
- Find the customer and open their Edit Customer card.
- Under ID Proof – Front, tap to capture with the camera or upload a photo. Use Change to replace it or Remove to clear it.
- Add the back of the document under ID Proof – Back the same way.
- Tap Save to keep the changes.

Good to know

- The first time you use the camera, the app asks permission — tap Allow.
- Delete Customer at the bottom removes the whole record — use it with care.
- A stored ID also shows up at payment time so you can check it's the same person collecting.

Customer ID Proofs — capture or upload the front and back of a customer's ID, then Save.

Customer Ratings

What it's for

Customer Ratings lets you keep a simple note of how each customer has been to deal with — a quick reputation at a glance. Each customer carries a rating (for example Perfect), the date it was last set, and any notes. It helps the counter spot a trusted regular, or a customer to take more care with.

How to get there

From the Home screen: Home → Customer Ratings.

Step by step

- Tap Customer Ratings on the Home screen.
- Find a customer by name, code, phone or email.
- Read their rating badge and the date it was last set.
- Tap a customer to open the Customer Rating card with the full rating, the last-rated time and any notes.
- Tap Close when you're done.

Good to know

- Ratings are a quick judgement call — keep them honest and they'll be useful to whoever serves the customer next.

Customer Ratings — open a customer to see their rating, when it was set and any notes.

Sales Report

What it's for

Sales Report is the business's scoreboard. It shows total revenue and orders, the average order value, tax collected, damage charges, late fees, discounts given and the net revenue — plus your best customers and your best-earning tools. Pick a period and export the lot.

How to get there

From the Home screen: Home → Sales Report.

Step by step

- Tap Sales Report on the Home screen.
- Choose a period — Today, This Week, This Month, This Year or All Time — or set your own Custom From and To dates.
- Use the payment chips (All, Cash, Card, Bank, Credit) to look at just one kind of takings.
- Read the summary cards, then scroll to Customers Ranked and Tools Ranked.
- Tap Full PDF or Full Excel at the top to export the whole report, or the PDF / Excel buttons on a single table.

Good to know

- Drag down to refresh the numbers.

Sales Report — headline totals, best customers and best-earning tools, all in one place.

Expenses

What it's for

Expenses is where you record what the business spends — fuel, repairs, supplies and the like. The cards across the top total it up for the period, and each expense moves through clear states: Draft, Submitted, Approved, Paid or Refused.

How to get there

From the Home screen: Home → Expenses.

Step by step

- Tap Expenses on the Home screen.
- Pick a period across the top — Today, Week, Month, Year or All.
- Use the state chips — All, Draft, Submitted, Approved, Paid, Refused — to filter.
- Tap + New (top-right) or Record First Expense to add one.
- Fill in the details and save; it then moves through the states as it's approved and paid.

Expenses — totals for the period up top, with each expense tracked from Draft through to Paid.

Discount Details

What it's for

Discount Details lists every order where a discount was given. The cards up top total it all — how many discounted orders, the total discount given, the average discount per order and the revenue after discount. Below, each row shows the customer, the order, who authorised it, the date, the amount knocked off and the order's status.

How to get there

From the Home screen: Home → Discount Details.

Step by step

- Tap Discount Details on the Home screen.
- Search by customer ID, order, name or who authorised it.
- Use the All Statuses dropdown to focus on one kind of order.
- Read each row to see exactly how much came off and on whose say-so.

Good to know

- The “Authorized By” column shows who approved each discount — useful for keeping giveaways in check.
- It's the quick way to answer “how much are we discounting, and who's giving it away?”

Discount Details — every discounted order, who authorised it and how much came off.

Tax Details

What it's for

Tax Details is the companion to Discount Details, but for tax. The cards up top total the taxed orders, the total tax collected, the average tax per order and the total revenue including tax. Each row then shows the customer, the order, the date, the subtotal, the tax added, the total and the status.

How to get there

From the Home screen: Home → Tax Details.

Step by step

- Tap Tax Details on the Home screen.
- Search by customer ID, order or name.
- Use the All Statuses dropdown to narrow the list.
- Read each row to see the subtotal, the tax added and the final total.

Good to know

- It's the one place to see exactly how much tax you've collected over a run of orders — handy at filing time.
- An order showing no tax (a dash, or a Draft) simply hadn't had tax applied.

Tax Details — tax collected across your orders, with a per-order breakdown.

Order Reports

What it's for

Order Reports is the master list of every order with the figures that matter. The cards up top show total orders, active rentals, total revenue and late returns. Below, each row carries the customer ID, the order, the customer, their phone, the date, the status and the amount.

How to get there

From the Home screen: Home → Order Reports.

Step by step

- Tap Order Reports on the Home screen.
- Search by customer ID, order, name or phone.
- Use the All Statuses dropdown to focus on one stage.
- Read down the list, or tap the arrow on a row to expand it.

Good to know

- Active Rentals tells you how many tools are out right now; Late Returns flags anything overdue.
- Where Sales Report is the summary, Order Reports is the line-by-line detail behind it.

Order Reports — every order with its status and amount, plus headline totals up top.

Rental Dashboard

What it's for

Rental Dashboard turns your rentals into a picture. The cards up top give the headline numbers — total revenue, total orders, average order, active rentals, late fees and discounts — and the chart below plots them over time. Switch what's measured and how it's grouped to see the trend you're after.

How to get there

From the Home screen: Home → Rental Dashboard.

Step by step

- Tap Rental Dashboard on the Home screen.
- Read the summary cards for the headline figures.
- Use the left dropdown to choose what the chart measures (e.g. Total Amount).
- Use the chart-type buttons to switch between bar, line and pie.
- Use the right dropdown to group by Month (or another period).

Good to know

- It's the quick “how are we doing?” glance, where Sales Report is the detailed dig.
- Tall bars are your strong periods — a fast way to spot busy and quiet months.

Rental Dashboard — headline cards and a chart of your rentals over time.

Your Profile

What it's for

Profile is your account at a glance. It shows your username and a Connected badge, your User ID, the database you're attached to, your role and your current branch. For administrators it also carries a shortcut to App Banners.

How to get there

Tap Profile in the bar at the bottom of the screen.

Step by step

- Tap Profile at the bottom.
- Check your details — User ID, Database, Role and Current Branch.
- Administrators can tap App Banners to manage the home-screen banners.

Good to know

- The Connected badge confirms the app is talking to your server.
- Working from a different branch today? This is where you switch.

Your Profile — account details, your role and branch, and the App Banners shortcut for admins.

App Banners

App Banners (for administrators only) controls the sliding pictures that appear across the top of the Home screen — the promotions everyone sees when they open the app. You reach it from the Profile screen.

Good to know

- Banners are a great spot for a seasonal offer or a reminder to staff.
- Changes show up for everyone the next time they open or refresh Home.
- If you don't see App Banners on your Profile, you're not signed in as an administrator.

Logging out

What it's for

Logging out signs you off the device so the next person has to use their own login. Because the app remembers you between sessions, logging out is the deliberate way to hand the tablet over.

How to get there

Tap Logout in the bar at the bottom of the screen.

Step by step

- Tap Logout at the bottom.
- A small box asks “Are you sure you want to logout?”
- Tap OK to sign out, or Cancel to stay.
- After logging out you're taken back to the login screen.

Logging out — the app asks first, so a stray tap won't sign you out.
